

Weighted blankets

Weighted blankets were first invented in Scandinavia and have been used there for many years in the healthcare sector, following years of scientific research.

Elderly people with dementia or psychic problems benefit most of all from a weighted blanket because it applies a certain pressure on the body, creating a sense of tranquillity, well-being and relaxation.

A weighted blanket can also be used during the day as a shoulder piece or jacket, allowing it to be worn outside the home.

Versions

PU

- PU fabric is impermeable
- Breathable
- Bi-elastic
- Anti-dust mite
- Antifungal
- Schimmelwerend
