

## Weighted blankets

Weighted blankets were first invented in Scandinavia and have been used there for many years in the healthcare sector, following years of scientific research. Weighted blankets are a popular aid for highly sensitive children, children suffering anxiety and/or behavioural disorders or concentration difficulties. Use of a weighted blanket reduces the level of stimuli in the body, giving a better sense of the body and reducing distraction from external stimuli.

## Versions

### Cotton

- Composition
  - 65% polyester
  - 35% cotton
- 245 g/m<sup>2</sup>

### PU

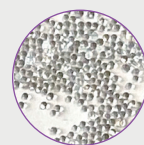

- Composition
  - 55% PU
  - 45% PE
- Impermeable
- Breathable
- Bi-elastic
- Anti-dust mite
- Antifungal
- Fire retardant BS 6807 CRIB 5
